

Color Input

The color input component allows the user to choose a color.

To use this component, first you insert it by selecting **Insert > Form > Color Input**. Then, you configure style and behavior using [properties](#).

For more information about using input components, see [Designing Input Components](#).

For a detailed reference of properties that affect input components, see [Common Properties](#) and [Input Component Properties](#).

A color input component in DGLux5

[Previous: Date Input](#)

[Next: Number Input](#)
