

NAN

Block Group:	Constants
Icon:	no icon

The NAN block is a [Number](#) block. When the NAN block is created, the NAN block holds the special number value NaN ("not a number").

NaN is the result of an undefined or invalid numeric operation. You can use the NAN block to set a number property to NaN.

For information on using dataflow blocks, see [Dataflow](#).

Input/Output Property

The following property of the NAN block can take input and give output.

- value (*number*)

value sets and returns the number held by this NAN block. When a NAN block is created, the **value** property holds NaN.
