

Median

Block Group:	Statistical Functions
Icon:	

The Median block returns the median of its arguments.

For information on using dataflow blocks, see [Dataflow](#).

For accepted and excluded arguments of Statistical Functions blocks, see [Statistical Functions](#).

Input/Output Property

The following property of the Median block can take input and give output.

- input n (*number*)

input n specifies one of the input values for the statistical function.

Output Property

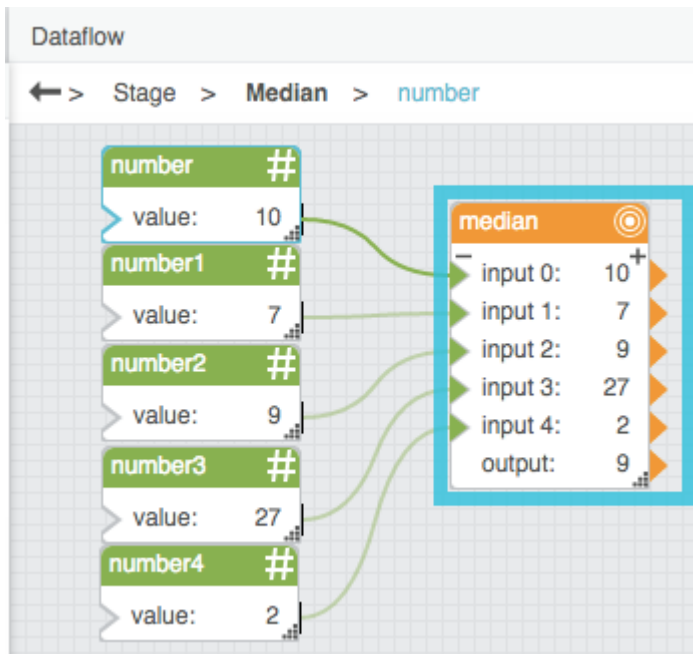

The following property of the Median block can give output but cannot take input.

- output (*number*)

output returns the median of the input values.

Example

The following image shows an example of the Median block.
