

Trim

| | |
|--------------|-------------------|
| Block Group: | String Operations |
| Icon: | c/p |

The Trim block removes all leading and trailing whitespace from text.

For information on using dataflow blocks, see [Dataflow](#).

Input/Output Property

The following property of the Trim block can take input and give output.

- input (*string*)

input specifies the text to remove whitespace from.

Output Property

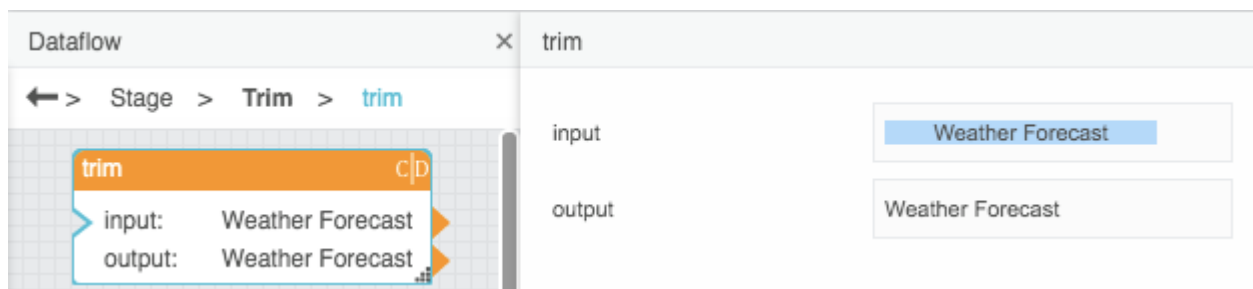

The following property of the Trim block can give output but cannot take input.

- output (*string*)

output returns the input text, with any leading or trailing whitespace removed.

Example

The following image shows an example of a Trim block. In this example, the Trim block removes space characters or Tab characters before and after "Weather Forecast".
