

Cotangent

Block Group:	Trigonometric Functions
Icon:	cot

The Cotangent block returns the cotangent of an angle, in degrees.

For information on using dataflow blocks, see [Dataflow](#).

Input/Output Property

The following property of the Cotangent block can take input and give output.

- input (*number*)

input specifies the angle to get the cotangent for, in degrees.

Output Property

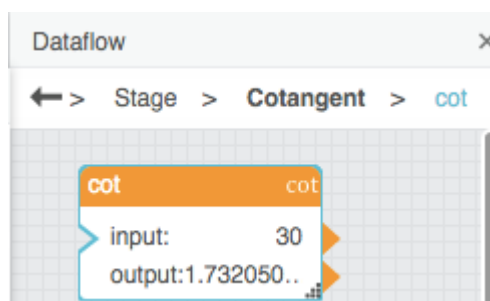

The following property of the Cotangent block can give output but cannot take input.

- output (*number*)

output returns the cotangent of the input.

Example

The following image shows an example of the Cotangent block. In this example, the angle is 30 degrees, and the cotangent is 1.732.
