Degree

Block Group:	Trigonometric Functions
Icon:	x°

The Degree block converts radians to degrees.

For information on using dataflow blocks, see Dataflow.

Input/Output Property

The following property of the Degree block can take input and give output.

- input *(number)*

input specifies the angle in radians, to convert to degrees.

Output Property

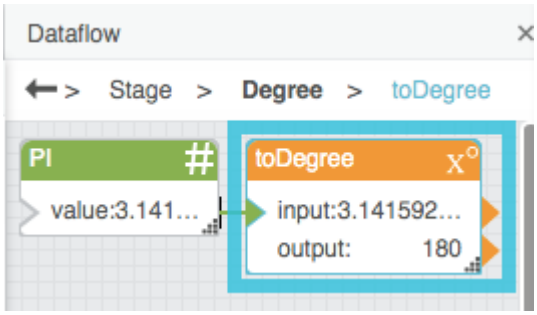

The following property of the Degree block can give output but cannot take input.

- output *(number)*

output returns the input value, converted from radians to degrees.

Example

The following image shows an example of the Degree block. In this example, pi is converted from radians to degrees.

Previous: Cotangent

Next: Radian
