Tangent

Block Group:	Trigonometric Functions
Icon:	tan

The Tangent block returns the tangent of the given angle.

For information on using dataflow blocks, see Dataflow.

Input/Output Property

The following property of the Tangent block can take input and give output.

- input *(number)*

input specifies the angle to get the tangent for, in degrees.

Output Property

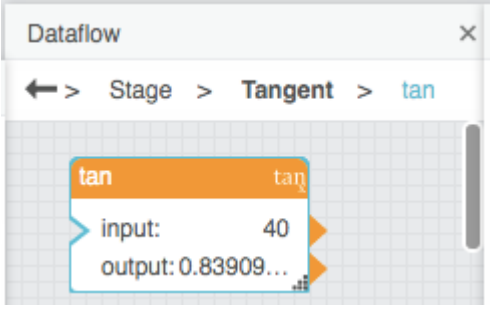

The following property of the Tangent block can give output but cannot take input.

- output *(number)*

output returns the tangent of the input.

Example

The following image shows an example of the Tangent block. In this example, the angle is 40, and the tangent is 0.839.
