How to Start and Open Projects (PA)

Use this page if you need to get to the Project Assist home page in a new or existing project in either the Project Assist Viewer or DGLux5.

How to Create and Open a Project in the Project Assist Viewer

An installation of the Project Assist Viewer can create only one project in Project Assist.

- To open this installation's project, log in to the Project Assist Viewer.

How to Open Project Assist and Start Working With It

To start a new project and open the **Project Assist** home page within the project:

1. Log in to **DGLux5**.

2. In the menu bar, select **Project > Open Project > Create New > Project Assist > PA2 > Choose > Create Project ("Project Name") > Ok**.

3. If the **index** page is not already open in the **Project** tree, double-click `index.dg5`.

4. Right-click **Preview** in the upper right-hand corner of the screen, and select "Open Viewer Link".

   This action opens **Project Assist 2.0**.

How to Open a Project Assist Project in DGLux5

To open an existing Project Assist project in DGLux5:

1. Log in to DGLux5.
2. In the menu bar, click **Project** and choose **Open Project**.

3. Choose the existing project, and click **Open**.

   The project opens in the [Project panel](#).

4. In the Project panel, double-click `index.dg5` to open the project's home page.

5. Right-click **Preview** and choose **Open Viewer Link**.

   The project opens to the Project Assist home page in the DGLux5 viewer.
