Add Location Nodes

Use location nodes to make the project structure reflect your locations.

Add a Location Node

To add a location node to your project, either follow the steps in this video, or follow these steps:

1. Click **Organize** or **Manage Navigation**.

   

2. In the Navigation Builder, select the **Navigation** tab, and drag the **Location** node into the Project Tree.

   

3. In the Project Tree, either double-click the node, or right-click the node and select **Edit**, to rename it.

   

4. Repeat steps 2–3 to continue adding nodes.

5. In the Project Tree, drag location nodes to change their order and nesting.

   Watch the blue line indicator in order to drop the nodes where you want them.

   
   These nodes will be children of the node on which they are dropped. The blue line is vertically centered on the text.

   
   This node will be a sibling of the node on which it is dropped. The blue line is aligned below the text.
