

DG Time Input

The screenshot shows the configuration panel for the 'Time Input' component. It features a dark theme with various settings:

- Value:** A text input field containing '0'.
- Min:** A dropdown menu set to 'null'.
- Max:** A dropdown menu set to 'null'.
- Step:** A dropdown menu set to '1'.
- Format:** A text input field containing 'HH:mm:ss.S'.
- Show Clear Button:** A checkbox that is currently unchecked.
- Show Stepper Buttons:** A checkbox that is currently unchecked.
- Focus Color:** A color selection box showing white.
- Focus Background Color:** A color selection box showing blue.
- Font:** A dropdown menu set to 'Arial'.
- Size:** A dropdown menu set to '12'.
- Formatting:** Three buttons for italic (*I*), bold (**B**), and underline (U).
- VA:** A dropdown menu set to '0'.

The DG Time Input component allows the user to enter a time of day. Unlike the other form input components, it is not a native HTML5 input: it is made of separate hour, minute, second, millisecond, and AM/PM fields, so it looks the same in every browser.

The **Value** of this component is a number of milliseconds since midnight (for example, 3600000 is 01:00). **Min**, **Max**, and **Step** are also in milliseconds. A value can't exceed 24 hours.

To use this component, first you insert it by selecting **Insert > Form > DG Time Input**. Then, you configure style and behavior using [properties](#).

For more information about using input components, see [Designing Input Components](#).

For a detailed reference of properties that affect input components, see [Common Properties](#) and [Input Component Properties](#).

Note

The **Format** property controls which fields are shown. For example, HH:mm shows hours (0-23) and minutes, hh:mm a shows 12-hour time with an AM/PM selector, and the default HH:mm:ss.S also shows seconds and milliseconds.
