Group and Stage Properties

These property groups apply to group components and the Stage.

- Layout properties affect the layout of this group's children.
- Scaling properties affect the placement of this group's children when Absolute layout is used.
- Repeater properties let the group repeat a symbol for each row of a table.
- Selection properties control how the group's children can be selected.

These group properties are not shown in the Property Inspector sections. They are available in the Advanced Properties panel and in dataflow:

Property	Description
reverseZIndex	If true, children are stacked in reverse order.
scrollX, scrollY	The current scroll position.
scrollWidth, scrollHeight	Read-only. The size of the scrollable content.
onScroll	Event that fires when the group is scrolled.
resizeEventEnabled / onResize	If **resizeEventEnabled** is true, the **onResize** event fires when the group size changes.
zoomToolEnabled	If true, shows a zoom tool that lets the user zoom the group's content. While enabled, the Scaling section is hidden.
zoomScale	The current zoom scale, from 0.2 to 5 (default 1).
zoomMethod	How zooming is centered: Center Point (default, uses **zoomCenterX**/**zoomCenterY**) or Rectangle (uses **zoomRectX**, **zoomRectY**, **zoomRectW**, **zoomRectH**).
zoomToolPosition	Corner where the zoom tool is shown: Left Top, Right Top, Right Bottom (default), or Left Bottom.
zoomMouseEnabled	If true, the mouse wheel zooms the content.
zoomPreviewVisibility	If true (default), a preview of the zoomed area is shown.

Groups and the Stage are also affected by common properties.
