Google Docs Loader

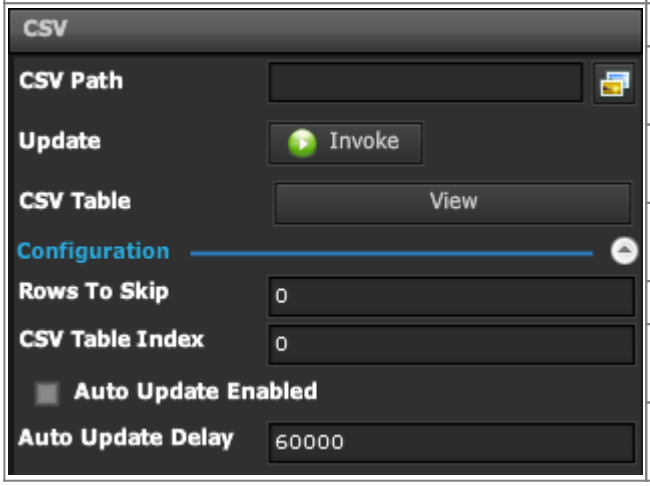

The CSV Loader is a component that allows you to bring in external data from a CSV source.

Workflows

The Standard Workflow for when using the CSV Loader is to first add the CSV file to the server (a process that can be completed via the File Management System). Once you've acquired a CSV Data source on your server, simply append the file path to the 'CSV Path' property of the widget. After you've defined the data source, you will now be able to use the CSV Table to bind to Repeaters, Filters, Charts, and much more.

Properties

Preview	Property	Description
	CSV Path	File Path to CSV File
	Update	Invoke to Refresh Table from CSV Data
	CSV Table	Output Table of Data parsed from CSV File
	Rows to Skip	Specify Number of Leading Rows to Skip
	CSV Table Index	
	Auto Update Enabled	Toggle whether CSV Table should Automatically Update
	Auto Update Delay	Specify Update Delay in Milliseconds
