

# Table Generator

The Table Generator allows you to define a set amount of rows to appear in the output table.

## Workflows

The Standard Workflow for using the Table Generator is to first decide how many rows you want to work with. The next step is usually to create formula or binding columns within the generated table to simulate, calculate, bind, or join data within a single table.

## Properties

Preview	Property	Description
	Number	Specify how many rows Table Generator is to create
	Output	Table Output containing specified amount of rows
