

# XML Loader

The XML Loader allows you to bring in external content via an XML Feed.

## Workflows

The Standard Workflow when applying the XML Loader to your dashboard is to first enter the URL to your XML Feed, along with any parameters that may be required. Once you've loaded a specific feed, the next step is to define how the data is parsed in DGLux. Once you've populated the Output Table with the data you've requested, the final step is to apply the data to your dashboard, typically done by binding the table to a Repeater or Chart.

## Properties

Preview	Property	Description
	XML Path	Specify a URL for an XML Feed
	Use Proxy	Toggle whether a Proxy Connection should be used
	Parameter	No Data, GET, POST
	Polling Interval	Specify Refresh Interval in Seconds
	Update	Invoke to Force Update
